

WARNING

Warning: Hot Surfaces

The group head, portafilter, steam wand, and the upper cup tray reach temperatures above 90 °C during normal operation and stay hot for several minutes after the machine is switched off. Contact with these surfaces causes burns.

- Always grip the portafilter by its insulated handle. Never touch the metal basket or spouts while the portafilter is still attached or freshly removed.
- Use a folded cloth or the supplied silicone sleeve when wiping the steam wand. Steam blowback can occur for up to a minute after the steam valve is closed.
- Do not place flammable materials (paper towels, plastic containers, pet food) on the cup warming tray.
- Wait at least 15 minutes after switching off before moving the machine or accessing internal components.
